

Voluntary Customer Generation Purchase Rider

AVAILABILITY

Available to any customer with a customer-owned generator of at least 75 kW.

RATE

The customer will continue to be billed for all demand and energy usage under the terms of all applicable rate schedules.

The customer will receive a payment in the form of a bill credit for the actual generation operation requested and received by the Company at the following rate: All kWh, per kWh: \$0.1500

CONDITIONS OF DELIVERY

1. Customers providing energy under this rider must sign an agreement indicating a willingness to produce energy using their generating unit. This agreement will specify the payments given to the customer for energy. The Company will only pay for energy provided by the customer during the time periods requested by the Company. The decision to actually generate energy is at the sole discretion of the customer.
2. Customer-owned generation currently employed to back up contracted interruptible demand will not be eligible for this tariff.
3. The Company would most likely purchase customer-generated energy during times of emergency or when the Company's firm power commitments cannot be supplied. The Company will not commence these purchases to avoid operation of the Company's available on-line generating units.
4. There will be no more than 150 hours of customer generation of energy through this rider during the calendar year.
5. Service may be limited at the sole discretion of the Company.
