

Green Power Tomorrow

AVAILABILITY

Service under this voluntary schedule is available to all customers.

Service under Option 3 of this schedule is mandatory for residential customers on Rate Schedule RFB-1.

RATE

All the provisions of the applicable rate schedules will apply, with the exception that customers served on this rider who:

1. Elect to purchase a block of energy will have a Renewable Energy Charge equal to \$0.01000 per kWh multiplied by the contracted monthly kWh block size added to each bill; or
2. Elect to purchase a percent of their energy under this rider will have an incremental energy charge of \$0.01000 per kWh applied to the contracted percentage of kWh each billing period.
3. Elect to purchase all of their energy under this rider, with an incremental energy charge of \$0.01000 per kWh applied to the portion of MGE's energy that is non-renewable. The renewable portion forecasted to be served by the standard resource portfolio will be displayed on the customer's bill and MGE will retire renewable energy credits associated with this amount. The current renewable percentage is 27%. This percentage will be updated annually.

The charge above is in addition to the monthly energy charges on the customer's standard file tariff rate.

All energy purchased under this rider is exempt from fuel cost surcharges and credits.

SPECIAL TERMS AND PROVISIONS

1. Energy produced by renewable energy projects may be limited, and service under this rider may be limited at the discretion of the Company, based on the expected level of renewable energy available.
2. Changes in the weather, renewable energy market, and other factors may result in less renewable power being generated than predicted. Upon review at the end of each calendar year, if annual energy produced and purchased from renewable energy sources was not sufficient to meet actual customer purchases, the Company will refund each currently participating customer, at the time of the review, an amount equal to the rate at which the renewable energy was charged multiplied by the difference between the actual renewable energy kWh delivered and the renewable energy kWh the customer committed to purchase.
3. Due to the fact this service is optional and increases utility bills, the Company may limit customer participation in the program based on bill payment and collections histories.
4. The Company may establish minimum block sizes and percentages for participants under this program. If the existing service level is below newly established minimums, customers who previously took under this program tariff prior to the effective date of the order in Docket 3270-UR-115 may continue service under either the block size or percentage level as of that date unless they subsequently change their service election.
5. If a non-residential customer desires to lock in the renewables adder rate effective at the time the customer initiates service under this rate schedule, the customer may do so by signing a multiyear contract for service for a period of time up to ten years. Customers who elect this option will remain on service for the term of the contract, at the contracted level of service and the rate effective at the time the contract is entered, regardless of changes from time to time that may be authorized in the rate schedule. Service can be continued after the term of the contract, if available, at the authorized rate that is then effective. The customer's contracted level of service may change from year to year if specified at the time the contract is entered. The level of service may be limited at the discretion of the Company. Customers who do not elect the contract option will receive service at the currently effective rates, which are subject to change as authorized by the Public Service Commission of Wisconsin. Residential customers may not elect this option. The final date when non-residential customers may sign up for the multi-year contract provision is one-year from June 1, 2026.
